1:100 000 – Scale Map of

6

Wetland classifications from 1:58,000 scale color infrared aerial photographs taken 1980, 1981 and other source data.

BASE MAP IS A PHOTOGRAPHIC ENLARGEMENT OF
A 1:250,000 — SCALE QUADRANGLE

SPECIAL NOTE The maps were prepared primarily by stereoscopic analysis of high altitude aerial photographs. Wetlands were identified on the photographs based on vegetation, visible hydrology, and geography in accordance with *Classification of Wetlands and Deep Water Habitats of the United States* (An Operational Draft) Cowardin, et al., 1977. The aerial photographs typically reflect conditions during the specific year and season when they were taken. An additional source of error can enter in the use of historical aerial photographs. Thus, a detailed ground and historical check of single sets of aerial photos may result in a revision of the wetland boundaries established through photographic interpretation. In addition, some small wetlands and those obscured by dense forest cover may not be shown.

Federal, State and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt to identify or describe wetlands or products of wetlands to define the limits of proprietary jurisdiction of any Federal, State or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate Federal, State or local agencies concerning specific agency regulatory programs and proprietary jurisdictions that may affect such activities.

Wetland polygons are photographically reduced from large scale overlays and positioned without internal

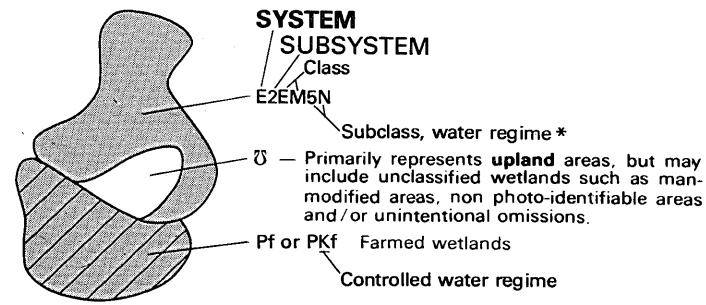

Meters	Feet
